Materials

Textile

Different types of materials such as Polyester, polyurethane, polyamide or neoprene are several of the synthetic fibers used in making resistant, breathable and elastic gloves. In this way, mixtures are generated that will improve each of the benefits provided by each type of fiber.

Cow & Goat Leather

Used since time immemorial, leather is one of the most versatile materials when it comes to flexibility, strength, durability and comfort. Regardless of the animal, it achieves airtight qualities to humidity and thus preserving a warm temperature that makes them perfect to withstand all kinds of travel.

Leather & Textile Mix

The good features about leather and the synthetic fibers come together to make high-quality and top performance gloves. It can be found either in a defined mixture or strategically fractionated and distributed above the glove assuring the rider in the most necessary areas.

SizeGuide

LS2
GLOVES

2021-2

Wrap a measuring tape **around your hand** behind the knuckles, not including the thumb, keeping the **ause lar-**ger of the two measurements.

Sizes	Man (mm)	Lady (mm)
S	172	93
M	176	97
L	180	101
XL	184	105
2XL	188	109
3XL	192	113
4XL	196	117
5XL	198	121

Certifications

The LS2 GLOVES are ready to wear and ride. All our gloves have passed the CE certified EN: 13594 standard "Protective gloves for motorcyclists" defines the precise, replicable framework based on scientific studies of accidentology for the conduct of tests to certify a protective glove for motorcyclists. The 2003 version of standard EN 13594 has been replaced by version EN13594 :2015; it no longer refers to "professional motorcyclists" only, but now applies to all two-wheel motorists. The gloves are designed to protect motorcyclists from the external elements without excessively hindering the dexterity of the user in operating the controls and the motorcycle switches. In addition, the gloves are designed to ensure the mechanical protection of the hands and wrists in case of an accident.

Level 1 :

Minimum level to ensure effective protection in case of an accident and to provide an optimum level of comfort for all types of driving.

Level 2 :

Designed to ensure elevated performance levels of protection in relation to the type of driving.
